Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/690,579	Applicant(s) YONEDA, MICHIAKI	
	Examiner Kevin Bates	Art Unit 2155	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2004.
 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-39 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) ☐ Claim(s) _____ is/are allowed.
 6) ☒ Claim(s) 1-39 is/are rejected.
 7) ☐ Claim(s) _____ is/are objected to.
 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☒ All b) ☐ Some * c) ☐ None of:
 1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2155

DETAILED ACTION

This Office Action is in response to a communication made on February 12, 2004.

Claims 1-39 are pending in this application.

Response to Amendment

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 31 – 39 are rejected under 35 U.S.C. 102(e) as being anticipated by lida (5900608).

Regarding claims 31, 33, and 34, lida discloses an information processing device (Column 9, lines 23 – 30) connected to other information processing devices (Column 9, lines 35 – 44) via a network (Column 9, lines 32 – 34), said information processing device comprising: first obtaining means for obtaining GUI data for specifying label printing conditions for applying to a recording medium from said other information processing devices via said network (Column 13, lines 26 – 33); display control means for controlling a display of a GUI based on the GUI data obtained by said first obtaining means (Column 13, lines 28 – 29); second obtaining means for obtaining said label

Art Unit: 2155

printing conditions the GUI regarding which the display thereof is controlled by said display control means (Column 13, lines 45 – 50), said label printing conditions including information on selectively printing on a label one or more of a title piece number, an artist name, and playing time (Column 10, lines 44 – 59); and requesting means for requesting printing of said label, to said other information processing devices via said network, under said label printing conditions obtained by said second obtaining means (Column 14, lines 49 – 53).

Regarding claims 35, 37, and 38, lida discloses an information processing device (Column 9, lines 35 – 44) connected to other information processing devices (Column 9, lines 23 – 30) via a network (Column 9, lines 32 – 34), said information processing device comprising: transmitting means for transmitting data of GUI specifying printing conditions for a label for applying to a recording medium, to said other information processing devices via said network (Column 13, lines 26 – 33); obtaining means for obtaining said printing conditions through said GUI from said other information processing devices via said network (Column 13, lines 45 – 50), said label printing conditions including information on selectively printing on a label one or more of a title piece number, an artist name, and playing time (Column 10, lines 44 – 59); and printing means for printing said label under said printing conditions obtained by said obtaining means, in the event that there is a request for printing said label, from said other information processing devices via said network (Column 14, lines 49 – 53).

Regarding claims 32 and 36 lida discloses an information processing device according to Claim 31, wherein said recording medium is a CD-R, MD, or semiconductor memory (Column 1, lines 14 – 17).

Regarding claim 39, lida discloses an information processing system wherein a first information processing device (Column 9, lines 23 – 30) and a second information processing device (Column 9, lines 35 – 44) are connected via a network (Column 9, lines 32 – 34); wherein said first information processing device comprises: first obtaining means for obtaining GUI data for specifying label printing conditions for applying to a recording medium from said second information processing device via said network (Column 13, lines 26 – 33); display control means for controlling the display of GUI based on the GUI data obtained by said first obtaining means (Column 13, lines 28 – 29); second obtaining means for obtaining said label printing conditions through the GUI regarding which the display thereof is controlled by said display control means (Column 13, lines 45 – 50), said label printing conditions including information on selectively printing on a label one or more of a title piece number, an artist name, and playing time (Column 10, lines 44 – 59); and requesting means for requesting printing of said label, to said second information processing device via said network, under said label printing conditions obtained by said second obtaining means (Column 14, lines 49 – 53); and wherein said second information processing device comprises: transmitting means for transmitting data of GUI specifying label printing conditions for applying to a recording medium, to said first information processing device via said network (Column 13, lines 26 – 33); third obtaining means for obtaining conditions input based on said GUI from

Art Unit: 2155

said first information processing device via said network (Column 13, lines 45 – 50); and printing means for printing said label under said printing conditions obtained by said third obtaining means, in the event that there is a request for printing said label, from said first information processing device via said network (Column 14, lines 49 – 53).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-7, 9, 11-16, 18-22, and 24-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over lida in view of Keller (6172948).

Regarding claims 1, 5, and 6, lida discloses an information processing device (Column 9, lines 23 - 30) connected to other information processing devices (Column 9, lines 35 - 44) via a network (Column 9, lines 32 – 34), said information processing device comprising: information specifying means for specifying information of which providing is to be received (Column 10, lines 43 – 52); notifying means for notifying said other information processing devices via said network of said information specified by said information specifying means (Column 14, lines 24 – 33); and requesting means for requesting said other information processing devices to record said information specified by said information specifying means to a recording medium (Column 14, lines 35 – 47), but lida does not explicitly indicate an obtaining means for obtaining capacity information relating to the capacity of said information notified by said notifying means

Art Unit: 2155

from said other information processing devices via said network and display control means for controlling display of said capacity information obtained by said obtaining means. Keller teaches an obtaining means for obtaining capacity information relating to the capacity of said information notified by said notifying means from a database provided in said other information processing devices via said network (Column 12, lines 64 – 67; Column 15, lines 52 – 57) and display control means for controlling display of said capacity information obtained by said obtaining means (Column 15, lines 52 – 57; Column 16, lines 1 – 5). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Keller's teaching of notifying and displaying the capacity information of the selected information in lida's information system in order for the system to know the size of specified information in relation to the available size on the recordable medium (Column 15, line 52 – Column 16, line 5).

Regarding claim 3, lida combined with Keller's teaching discloses said information of which providing is received from said other information processing devices contains music information (lida, Column 2, lines 9 – 14); and wherein said capacity information contains playing time of the information (Keller, Column 16, line 1 – 2).

Regarding claims 7, 13, and 14, lida combined with Keller's teaching discloses an information processing device (lida, Column 9, lines 35 - 44) connected to other information processing devices (lida, Column 9, lines 23 - 30) via a network (lida, Column 9, lines 32 – 34), said information processing device comprising: first obtaining means for obtaining specifying information which specifies provided information, from

Art Unit: 2155

said other information processing devices via said network (Iida, Column 10, lines 43 – 52); second obtaining means for obtaining capacity information relating to the capacity of said provided information corresponding to said specifying information obtained by said first obtaining means from a database (Keller, Column 12, lines 64 – 67; Column 15, lines 52 – 57); notifying means for notifying said other information processing devices via said network of said capacity information obtained by said second obtaining means (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5); third obtaining means for obtaining said provided information corresponding to said specifying information obtained by said first obtaining means (Iida, Column 14, lines 40 – 45); and recording means for recording said provided information obtained by said third obtaining means to a recording medium (Iida, Column 14, lines 45 – 47).

Regarding claim 9, Iida combined with Keller's teaching discloses that the computing means for computing the total of the capacity of said provided information corresponding to said specifying information obtained by said first obtaining means (Keller, Column 16, lines 1 – 5); wherein said notifying means notifies said other information processing devices of the total of the capacity of said provided information, computed by said computing means (Keller, Column 16, lines 1 – 5).

Regarding claim 11, Iida combined with Keller's teaching discloses that the provided information to be provided to said other information processing devices contains music information (Iida, Column 2, lines 9 – 14); and wherein said capacity information contains playing time of the information (Keller, Column 16, lines 1 – 5).

Regarding claim 15, lida combined with Keller's teaching discloses an information providing system wherein a first information processing device (lida, Column 9, lines 23 - 30) and a second information processing device (lida, Column 9, lines 35 - 44) are mutually connected via a network (lida, Column 9, lines 32 - 34); wherein said first information processing device comprises: information specifying means for specifying provided information (lida, Column 10, lines 43 - 52); first notifying means for notifying said second information processing device via said network of said provided information specified by said information specifying means (lida, Column 14, lines 24 - 33); first obtaining means for obtaining capacity information relating to the capacity of said provided information notified by said first notifying means from a database provide in said second information processing device via said network (Keller, Column 12, lines 64 - 67; Column 15, lines 52 - 57); display control means for controlling display of said capacity information obtained by said first obtaining means (Column 15, lines 52 - 57; Column 16, lines 1 - 5); and requesting means for requesting said second information processing device to record said provided information specified by said information specifying means to a recording medium (lida, Column 14, lines 35 - 47); and wherein said second information processing device comprises: second obtaining means for obtaining specifying information which specifies said provided information (lida, Column 10, lines 43 - 52), from said first information processing device via said network third obtaining means for obtaining capacity information relating to the capacity of said provided information corresponding to said specifying information obtained by said second obtaining means from a database (Keller, Column 12, lines 64 - 67; Column

Art Unit: 2155

15, lines 52 – 57); second notifying means for notifying said first information processing device via said network of said capacity information obtained by said third obtaining means (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5); fourth obtaining means for obtaining said provided information corresponding to said specifying information obtained by said second obtaining means (Iida, Column 14, lines 40 – 45); and recording means for recording said provided information obtained by said fourth obtaining means to said recording medium (Iida, Column 14, lines 45 – 47).

Regarding claims 16, 20, and 21, Iida combined with Keller's teaching discloses an information processing device (Iida, Column 9, lines 23 - 30) connected to other information processing devices (Iida, Column 9, lines 35 – 44) via a network (Iida, Column 9, lines 32 – 34), said information processing device comprising: transmitting means for transmitting specifying information for specifying information for which notification of capacity is desired, to said other information processing devices via said network (Keller, Column 15, lines 52 – 57); obtaining means for obtaining capacity information relating to the capacity of said information corresponding to said specifying information transmitted by said transmitting means, from a database provide in said other information processing devices via said network (Keller, Column 12, lines 64 – 67; Column 15, lines 52 – 57); and display control means for controlling the display of said capacity information obtained by said obtaining means (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5).

Regarding claim 4 and 18, Iida discloses that the recording medium is a CD-R, MD, or semiconductor memory (Column 1, lines 14 – 17).

Regarding claim 19, lida combined with Keller's teaching discloses that the information specified by said specifying information contains music information (lida, Column 2, lines 9 – 14); and wherein said capacity information contains playing time of said music (Keller, Column 16, lines 1 – 5).

Regarding claim 22, 28, and 29 lida combined with Keller's teaching discloses an information processing device (lida, Column 9, lines 35 – 44) connected to other information processing devices (lida, Column 9, lines 23 - 30) via a network (lida, Column 9, lines 32 – 34), said information processing device comprising: first obtaining means for obtaining specifying information for specifying the information regarding which notification of capacity is desired, from said other information processing devices via said network (Keller, Column 15, lines 52 – 57); second obtaining means for obtaining capacity information relating to the capacity of said information corresponding to said specifying information obtained by said first obtaining means from a database (Keller, Column 12, lines 64 – 67; Column 15, lines 52 – 57); and notifying means for notifying said capacity information obtained by said second obtaining means to said other information processing devices via said network (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5).

Regarding claims 12 and 24, lida discloses that the recording medium is a CD-R, MD, or semiconductor memory (Column 1, lines 14 – 17).

Regarding claim 25, lida discloses that the comprising computing means for computing the total of the capacity of the information for which notification of capacity is desired corresponding to said specifying information obtained by said first obtaining

Art Unit: 2155

means (Column 6, lines 42 – 45), and the remaining time wherein said information for which notification of capacity is desired corresponding to said specifying information obtained by said first obtaining means can be recorded on said recording medium (Column 7, lines 8 – 11); wherein said notifying means notifies the total of the capacity of the information for which notification of capacity is desired which has been computed by said computing means (Column 6, lines 46 – 51), and also the remaining time wherein said information can be recorded on said recording medium, to said other information processing devices (Column 7, line 66 – Column 8, line 3).

Regarding claim 26, lida combined with Keller's teaching discloses that the comprising computing means for computing the total of the capacity of the information for which notification of capacity is desired corresponding to said specifying information obtained by said first obtaining means (Keller, Column 15, lines 52 – 57); wherein said notifying means also notifies the total of the capacity of the information for which notification of capacity is desired, which has been computed by said computing means, to said other information processing devices (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5).

Regarding claim 27, lida combined with Keller's teaching discloses information of which notification of capacity is desired contains music information (lida, Column 2, lines 9 – 14); and wherein said capacity information contains playing time of said music (Keller, Column 16, lines 1 – 5).

Regarding claim 30, lida combined with Keller's teaching discloses an information processing system wherein a first information processing device (lida,

Art Unit: 2155

Column 9, lines 23 – 30) and a second information processing device (Iida, Column 9, lines 35 – 44) are mutually connected via a network (Iida, Column 9, lines 32 – 34); wherein said first information processing device comprises: transmitting means for transmitting specifying information for specifying information for which notification of capacity is desired, to said second information processing device via said network (Keller, Column 15, lines 52 – 57); first obtaining means for obtaining capacity information relating to the capacity of said information corresponding to said specifying information transmitted by said transmitting means, from a database provided in said second information processing device via said network (Keller, Column 12, lines 64 – 67; Column 15, lines 52 – 57); and display control means for controlling the display of said capacity information obtained by said first obtaining means (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5); and wherein said second information processing device comprises: second obtaining means for obtaining specifying information for specifying the information regarding which notification of capacity is desired, from said first information processing device via said network (Keller, Column 15, lines 52 – 57); third obtaining means for obtaining capacity information relating to the capacity of said information corresponding to said specifying information obtained by said second obtaining means (Keller, Column 12, lines 64 – 67; Column 15, lines 52 – 57) from said database; and notifying means for notifying said capacity information obtained by said third obtaining means to said first information processing device via said network (Keller, Column 15, lines 52 – 57; Column 16, lines 1 – 5).

Claims 2, 8, 10, 17, and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over lida in view of Keller as applied to claims 1, 3-7, 9, 11-16, 18-22, and 24-30 above, and further in view of Saeki (6597862).

Regarding claims 2, 8 and 17, lida combined with Keller's does not explicitly disclose that a recording medium specifying means for specifying said recording medium medium from said other information processing devices via said network. Saeki teaches a recording medium specifying means for specifying said recording medium (Saeki, Column 9, lines 47 – 55) wherein said transmitting means also transmits said recording medium specified by said recording medium specifying means to said other information processing devices (Saeki, Column 9, lines 47 – 55). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Saeki's teaching of specifying the desired recording medium in order to be able to manage a group of recording mediums and have device be able to pick and choose among that group which device is the best option for recording (Saeki, Column 2, lines 48 – 61).

Regarding claims 10 and 23, lida combined with Keller and Saeki discloses that the computing means further computes the remaining time wherein said provided information corresponding to said specifying information obtained by said first obtaining means can be recorded on said recording medium (Saeki, Column 7, lines 8 – 11); and wherein said notifying means also notifies said other information processing devices of the total capacity of said provided information and time capable of recording, computed by said computing means (Saeki, Column 7, line 66 – Column 8, line 3).

Response to Arguments

Applicant's arguments with respect to claims 1-30 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's arguments with respect to claims 31-39 have been fully considered but they are not persuasive. The reference, Iida (6900608) discloses as shown in the rejection to the amendments that it includes using a graphical interface to enter among other things the artist name and song title, which is then printed on the jacket.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U. S. Patent No 6665784 issued to Ihde because it teaches calculating capacity information about the selected files to store on a recordable medium and the files already recorded on that medium.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2155

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Bates whose telephone number is (703) 605-0633. The examiner can normally be reached on 8 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain Alam can be reached on (703) 308-6662. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
